Reister no.

192472159

SLOT *

A

B

1.Preprocessing improves feature detection by *

1 point

Increasing Size

Changing format

Increasing brightness

Reducing noise

2. Without preprocessing, detection becomes *

1 point

- ☐ Better
- ☒ Inconsistent
- ☐ Same
- ☐ Faster

3. Grayscale conversion helps in *

1 point

- ☒ Reducing complexity
- ☐ Increasing color
- ☐ Adding noise
- ☐ Increasing resolution

4. Binary representation is useful for *

1 point

- ☐ C) Color enhancement
- ☐ A) Texture detection
- ☐ D) Contrast increase
- ☒ B) Foreground separation

5. Image representation affects *

1 point

- ☐ C) Memory only
- ☐ D) Edge removal
- ☒ B) Feature visibility
- ☐ A) Pixel size

6. Edge detection identifies *

1 point

- ☐ D) Colors
- ☒ B) Intensity change
- ☐ C) Smooth regions
- ☐ A) Noise

7. Canny is preferred due to *

1 point

- ☒ B) Low error
- ☐ C) Memory
- ☐ D) Size
- ☐ A) Speed

8. Sobel is sensitive to *

1 point

- ☐ C) Size
- ☐ A) Color
- ☐ D) Resolution
- ☒ B) Noise

9. Weak edges occur due to *

1 point

- ☐ A) High contrast
- ☐ C) High resolution
- ☐ D) Size
- ☒ B) Low gradients

10. Edge detection fails when *

1 point

- ☐ B) Strong gradients
- ☐ A) Smooth image
- ☒ C) Noise dominates
- ☐ D) High resolution

11. Corner detection finds *

1 point

- ☐ A) Flat regions
- ☐ D) Noise
- ☒ C) Intensity variation
- ☐ B) Edges

12. Harris is sensitive to *

1 point

- ☐ C) Intensity
- ☐ A) Rotation
- ☐ B) Translation
- ☒ D) Noise

13. Corners are useful because *

1 point

- ☐ D) Less intensity
- ☐ A) Smooth
- ☐ C) Large
- ☒ B) Distinctive

14. Harris works well in *

1 point

- ☐ A) Uniform
- ☐ D) Blurred
- ☒ B) Textured
- ☐ C) Flat

15. Hough Transform is for *

1 point

- ☐ A) Noise removal
- ☐ C) Compression
- ☐ D) Color
- ☒ B) Shape detection

Few corners due to *

1 point

- ☐ C) High resolution
- ☐ D) Sharp edges
- ☒ B) Excess smoothing
- ☐ A) High contrast

Hough transform works using *

1 point

- ☐ A) Ignoring noise
- ☐ D) Grayscale
- ☒ B) Voting
- ☐ C) Reducing pixels

Poor Hough result due to *

1 point

- ☐ A) Clean image
- ☐ C) Strong edges
- ☒ B) Noise
- ☐ D) High resolution

Preprocessing helps Hough by *

1 point

- ☐ A) Adding noise
- ☒ B) Enhancing edges
- ☐ C) Reducing resolution
- ☐ D) Removing features

SIFT is invariant to *

1 point

- ☐ A) Noise
- ☒ B) Scale & rotation
- ☐ C) Color
- ☐ D) Resolution

Hough maps to *

1 point

- ☐ D) Edges
- ☒ B) Parameter space
- ☐ C) Colors
- ☐ A) Frequency

Matching fails when *

1 point

- ☐ A) Similar images
- ☒ B) Weak features
- ☐ C) Low noise
- ☐ D) High resolution

PCA improves *

1 point

- ☐ D) Pixels
- ☐ C) Noise
- ☒ B) Efficiency
- ☐ A) Data size

SIFT works better due to *

1 point

- ☒ B) Scale invariance
- ☐ D) Grayscale
- ☐ A) Color
- ☐ C) Size

Feature matching is used in *

1 point

- ☐ C) Noise removal
- ☐ A) Compression
- ☒ B) Recognition
- ☐ D) Histogram

PCA removes *

1 point

- ☐ D) Pixels
- ☐ A) Features
- ☐ C) Noise
- ☒ B) Correlation

PCA may cause *

1 point

- ☐ B) Noise
- ☐ C) Edge loss
- ☒ A) Data loss
- ☐ D) Color change

PCA is used for *

1 point

- ☒ B) Dimensionality reduction
- ☐ D) Smoothing
- ☐ A) Edge detection
- ☐ C) Noise addition

Missing corners fixed by *

1 point

- ☐ B) Size
- ☒ A) Threshold
- ☐ C) Color
- ☐ D) Resolution

Scale issue solved by *

1 point

- ☐ C) PCA
- ☐ A) Sobel
- ☒ B) SIFT
- ☐ D) Thresholding

Redundant features handled by *

1 point

- ☐ C) Hough
- ☐ D) Smoothing
- ☐ A) Edge
- ☒ B) PCA

PCA is applied after *

1 point

- ☐ D) Thresholding
- ☐ C) Filtering
- ☒ B) Feature extraction
- ☐ A) Segmentation

False Hough detection fixed by *

1 point

- ☐ A) Noise
- ☒ B) Preprocessing
- ☐ C) Color
- ☐ D) Resolution

First step if edges fail *

1 point

- ☐ A) PCA
- ☒ B) Preprocessing
- ☐ C) SIFT
- ☐ D) Hough

Shape detection uses *

1 point

- ☐ A) PCA+SIFT
- ☒ B) Edge+Hough
- ☐ C) Smooth+PCA
- ☐ D) Hist+SIFT

Feature extraction fails when *

1 point

- ☒ A) Noisy image
- ☐ B) Clear image
- ☐ C) Large image
- ☐ D) Small image

Preprocessing improves *

1 point

- ☐ A) Noise
- ☒ B) Features
- ☐ C) Pixels
- ☐ D) Edges

Incorrect matches due to *

1 point

- ☐ A) Strong features
- ☒ B) Similar descriptors
- ☐ C) High contrast
- ☐ D) High resolution

Edge + Hough improves *

1 point

- ☐ A) Noise
- ☒ B) Shape detection
- ☐ C) Color
- ☐ D) Compression

Corner detection used for

1 point

- ☐ A) Noise removal
- ☒ B) Matching
- ☐ C) Smoothing
- ☐ D) Thresholding

Clear selection

Rotation matching uses *

1 point

- ☐ A) Sobel
- ☒ B) SIFT
- ☐ C) Threshold
- ☐ D) PCA

Feature extraction helps *

1 point

- ☐ A) Compression
- ☒ B) Key points
- ☐ C) Noise
- ☐ D) Color

Preprocessing + features improve *

1 point

- ☐ A) Noise
- ☒ B) Accuracy
- ☐ C) Size
- ☐ D) Color

Preprocessing needed for *

1 point

- ☐ A) Visualization
- ☒ B) Feature extraction
- ☐ C) Compression
- ☐ D) Storage

Harris fails in *

1 point

- ☐ A) Textured
- ☒ B) Uniform
- ☐ C) Noisy
- ☐ D) High contrast

Preprocessing is done before: *

1 point

- ☐ A) Storage
- ☒ B) Feature extraction
- ☐ C) Display
- ☐ D) Compression

Binary image contains: *

1 point

- ☒ A) Two intensity levels
- ☐ B) Three levels
- ☐ C) Multiple levels
- ☐ D) Continuous values

Edge detection helps in: *

1 point

- ☐ A) Noise addition
- ☒ B) Boundary detection
- ☐ C) Compression
- ☐ D) Enhancement

Edge detection detects:

1 point

- ☐ A) Color
- ☒ B) Intensity changes
- ☐ C) Shape
- ☐ D) Texture

Clear selection

Pixel intensity represents: *

1 point

- ☐ A) Position
- ☒ B) Brightness
- ☐ C) Shape
- ☐ D) Color depth

Edge output used in *

1 point

- ☐ A) PCA
- ☒ B) Hough
- ☐ C) Smoothing
- ☐ D) Threshold

Gradient magnitude indicates: *

1 point

- ☐ A) Color
- ☒ B) Edge strength
- ☐ C) Size
- ☐ D) Shape

Sobel operator is used for: *

1 point

- ☐ A) Smoothing
- ☒ B) Edge detection
- ☐ C) Compression
- ☐ D) Segmentation

PCA transforms to *

1 point

- ☐ A) Spatial
- ☐ B) Frequency
- ☒ C) Feature space
- ☐ D) Binary

Matching depends on

1 point

- ☐ A) Size
- ☒ B) Distinctiveness
- ☐ C) Color
- ☐ D) Resolution

Clear selection

Feature pipeline improves *

1 point

- ☐ A) Size
- ☒ B) Accuracy
- ☐ C) Noise
- ☐ D) Compression

Image preprocessing improves: *

1 point

- ☐ A) Storage
- ☒ B) Quality for analysis
- ☐ C) Transmission
- ☐ D) Display

SIFT uses

1 point

- ☐ A) Color
- ☒ B) Gradients
- ☐ C) Resolution
- ☐ D) Size

Clear selection

Grayscale image is represented using: *

1 point

- ☒ A) 1 channel
- ☐ B) 2 channels
- ☐ C) 3 channels
- ☐ D) 4 channels

Feature extraction is used to: *

1 point

- ☐ A) Store images
- ☒ B) Reduce redundancy
- ☐ C) Compress data
- ☐ D) Enhance brightness

What is the primary purpose of preprocessing in image analysis? *

1 point

- ☐ A) Compression
- ☐ B) Enhancement
- ☒ C) Preparation for feature extraction
- ☐ D) Storage

Which preprocessing step removes noise? *

1 point

- ☐ A) Edge detection
- ☒ B) Smoothing
- ☐ C) Segmentation
- ☐ D) Thresholding

Image representation refers to *

1 point

- ☐ A) Storage format
- ☒ B) Mathematical description of image
- ☐ C) Image size
- ☐ D) Color type

Edge detection is important for: *

1 point

- ☐ A) Compression
- ☒ B) Object boundaries
- ☐ C) Storage
- ☐ D) Display

Corner is intersection of: *

1 point

- ☐ A) Lines
- ☐ B) Pixels
- ☒ C) Edges
- ☐ D) Colors

Feature descriptors represent: *

1 point

- ☐ A) Color
- ☐ B) Pixels
- ☐ C) Shape
- ☒ D) Feature characteristics

Prewitt operator is used for: *

1 point

- ☐ A) Filtering
- ☒ B) Edge detection
- ☐ C) Segmentation
- ☐ D) Enhancement

Matching is based on: *

1 point

- ☒ A) Distance
- ☐ B) Shape
- ☐ C) Color
- ☐ D) Size

PCA is based on: *

1 point

- ☐ A) Color
- ☐ B) Shape
- ☒ C) Variance
- ☐ D) Mean

PCA helps in: *

1 point

- ☐ A) Enhancement
- ☐ B) Noise addition
- ☒ C) Feature reduction
- ☐ D) Segmentation

Hough Transform is parameter-based: *

1 point

- ☐ A) False
- ☐ B) Partial
- ☒ C) True
- ☐ D) None

PCA finds: *

1 point

- ☐ A) Edges
- ☐ B) Pixels
- ☐ C) Shapes
- ☒ D) Principal components

Image representation helps in: *

1 point

- ☐ A) Storage
- ☐ B) Display
- ☒ C) Analysis
- ☐ D) Compression

Feature matching is robust to: *

1 point

- ☐ A) Color
- ☐ B) Noise
- ☒ C) Scale changes
- ☐ D) Shape

Euclidean distance is used for:

1 point

- ☐ A) Compression
- ☐ B) Segmentation
- ☐ C) Filtering
- ☒ D) Matching

Clear selection

Gradient is maximum at: *

1 point

- ☐ A) Flat region
- ☒ B) Edge
- ☐ C) Corner
- ☐ D) Noise

Keypoints are: *

1 point

- ☐ A) Noise
- ☐ B) Colors
- ☒ C) Important features
- ☐ D) Pixels

Feature extraction helps in: *

1 point

- ☒ A) Recognition
- ☐ B) Compression
- ☐ C) Storage
- ☐ D) Display

PCA reduces: *

1 point

- ☐ A) Noise
- ☒ B) Dimensions
- ☐ C) Color
- ☐ D) Size

Edges occur at: *

1 point

- ☐ A) Constant intensity
- ☒ B) Intensity discontinuity
- ☐ C) Low variation
- ☐ D) Smooth regions

Matching uses:

1 point

- ☒ A) Distance metrics
- ☐ B) Shape
- ☐ C) Color
- ☐ D) Size

Clear selection

Feature matching is used in: *

1 point

- ☒ A) Object recognition
- ☐ B) Compression
- ☐ C) Storage
- ☐ D) Enhancement

Eigenvectors represent: *

1 point

- ☐ A) Noise
- ☐ B) Color
- ☐ C) Pixels
- ☒ D) Data directions

PCA maximizes: *

1 point

- ☐ A) Color
- ☐ B) Mean
- ☒ C) Variance
- ☐ D) Noise

Eigenvalues represent: *

1 point

- ☒ A) Importance
- ☐ B) Color
- ☐ C) Shape
- ☐ D) Size

PCA removes: *

1 point

- ☐ A) Color
- ☐ B) Shape
- ☒ C) Redundancy
- ☐ D) Noise

PCA is used for: *

1 point

- ☐ A) Enhancement
- ☐ B) Classification
- ☒ C) Compression
- ☐ D) Filtering

PCA components are: *

1 point

- ☐ A) Correlated
- ☐ B) Random
- ☒ C) Independent
- ☐ D) Fixed

PCA transforms data into: *

1 point

- ☐ A) Pixel space
- ☐ B) Color space
- ☐ C) Same space
- ☒ D) New space

Feature matching compares: *

1 point

- ☐ A) Colors
- ☐ B) Pixels
- ☐ C) Sizes
- ☒ D) Features

Scale-invariant means: *

1 point

- ☐ A) Same size
- ☐ B) Fixed scale
- ☐ C) No scaling
- ☒ D) Works at different scales

SIFT is used for: *

1 point

- ☐ A) Compression
- ☐ B) Thresholding
- ☒ C) Feature detection
- ☐ D) Filtering

Hough Transform is used for: *

1 point

- ☐ A) Compression
- ☐ B) Enhancement
- ☒ C) Shape detection
- ☐ D) Noise removal

Hough Transform detects: *

1 point

- ☒ A) Lines and shapes
- ☐ B) Colors
- ☐ C) Noise
- ☐ D) Edges

Harris corner detection is used for: *

1 point

- ☐ A) Noise removal
- ☒ B) Feature detection
- ☐ C) Compression
- ☐ D) Enhancement

Feature extraction reduces: *

1 point

- ☐ A) Noise
- ☒ B) Data dimension
- ☐ C) Color
- ☐ D) Brightness

Corner detection identifies: *

1 point

- ☐ A) Flat regions
- ☒ B) High variation points
- ☐ C) Noise
- ☐ D) Smooth areas

Feature detection helps in: *

1 point

- ☒ A) Recognition
- ☐ B) Storage
- ☐ C) Display
- ☐ D) Compression

Image preprocessing improves: *

1 point

- ☐ A) Display
- ☐ B) Compression
- ☒ C) Analysis accuracy
- ☐ D) Storage

Corner detection is important for: *

1 point

- ☐ A) Storage
- ☒ B) Matching
- ☐ C) Compression
- ☐ D) Display
